Description

Bio Fluid is a product for degreasing and odor neutralization using the bee*pure® air system. The automatic bee*pure® air purification system with pre-programmed microdiffusion is a permanently installed device for the permanent biological cleaning of exhaust air systems.

technology

The biotechnological functionality is based on microorganisms and fermentation extracts, which develop an unparalleled effectiveness, especially in the breakdown of fats and oils. The bio fluid is sprayed in the form of mist via special, powerful sprayers that are permanently mounted in the extractor hood and the exhaust air shaft. This means that it settles in all places in the extraction system, including the places that are difficult to reach. The ingredients have been developed over decades of research perfectly coordinated and specially designed for this system. So a perfect, residue-free and permanent biological cleaning is guaranteed.

components

<5% non-ionic surfactants, <5% amphoteric surfactants, enzymes, bacterial cultures, colorants, preservatives.

dosage

Ready to use.

For professional use only.

domain

Bio Fluid is ideal for automatic degreasing and reducing the fire load of grease extraction systems in the food industry or catering industry **(HACCP compliant)**.

instructions for use

1. Perform a one-time professional degreasing before using our bee*pure® air system used to achieve optimal cleaning results immediately.
2. The bee*pure® air system, installed and programmed according to your wishes, degreases fully automatically and permanently.

cleaning instructions

- Only have the bee*pure® air system installed if our service employees.
